

Software Requirements Specification (SRS) for Noteify

1. Introduction

1.1 Purpose

The purpose of this document is to outline the functional and non-functional requirements for **Noteify**, a web-based repository designed to streamline the distribution of lecture notes.

1.2 Scope

Noteify is a centralized web based platform where the students community worldwide can access notes and ideas ,like an online library.Lecturers can also upload official academic content and students can download and preview these notes.

Notes are organized by:

- School
- Department
- Course
- Unit

The system will allow students to:

- Browse courses and units
- Search for notes
- View and download study materials
- Track updates in their courses

It is not intended to be a full Learning Management System (LMS)—it focuses specifically on **resource sharing**.

2. Overall Description

2.1 Product Perspective

Noteify is a standalone web application. It requires an internet connection and a standard web browser to function.

2.2 User Classes and Characteristics

User Class	Responsibility
Lecturer	Can create folders (courses), upload files, and delete their own content.
Student	Can browse courses, search for specific notes, and download files.
Admin	Manages user accounts and monitors site storage/integrity.

3. Functional Requirements

3.1 User Authentication

- Users must be able to sign up using their institutional email addresses.
- The system must distinguish between "Lecturer" and "Student" roles during login.

3.2 Admin Features (Upload)

- Administrators shall be able to create "Course Folders" (e.g., CS101, Math 202).
- Administrators shall be able to upload files in .pdf, .docx, and .pptx formats.
- Administrators must be able to add a description or title to each uploaded file.

3.3 Student Features (Download)

- Students shall be able to search for notes by Course Name, Lecturer Name, or Date.
 - Students shall be able to download files to their local device without editing permissions.
 - Students should be able to "Favorite" a course for quick access.
-

4. Non-Functional Requirements

4.1 Security

- All file transfers must be encrypted via HTTPS.
- Students must not have "Write" or "Delete" access to any files on the server.

4.2 Performance

- The system should support up to 500 concurrent downloads without a significant drop in speed.
- File upload progress bars must be visible to Lecturers to prevent session timeouts.

4.3 Usability

- The interface must be mobile-responsive, as many students access notes via smart phones.
-

5. System Features & Interface

External Interface Requirements

User Interface

The system will include:

- Sidebar navigation
 - Dashboard layout
 - Search bar
 - Notes display area
-

Software Interface

The system will interact with:

- Web browsers

- JSON data storage
- Backend server APIs

5.1 Database Requirements

The system must maintain a database to track:

USERS_TABLE	SCHOOLS_TABLE	COURSE_TABLE	UNITS_TABLE	NOTES_TABLE
user_id	-school_id	department_id	unit_id	note_id
name	school_name	school_id	course_id	unit_id
email		department_name	unit_name	-lecturer_id
role				file_url
password_hash				upload_date

5.2 External Interface

- **Storage:** Integration with a cloud storage provider (e.g., AWS S3 or Google Cloud Storage) to host the actual files.
